Version History

Version Number	Artifact(s) Updated
V1.0	<ul style="list-style-type: none">• Creation of Actor Goal List• Added Use case Diagram• Added High level use case descriptions of use cases identified in use case diagram
v2.0	<ul style="list-style-type: none">• Added Expanded Use Cases of High level use cases identified in previous version, 9 out of 12.• Fixed Inheritance error in use case diagram.• Added Wireframes for expanded use cases.
v3.0	<ul style="list-style-type: none">• Added System Sequence Diagrams for expanded use cases.• Added JavaFx Screens.• Added Domain Model for the whole system.• Updated Expanded Use cases: Added pre,post conditions.• Updated UC-0010: Removed patient from actor
v4.0	<ul style="list-style-type: none">• Added Sequence diagrams for System Sequence Diagrams• Updated Use Case Diagram.• Updated System sequence diagram for Search Doctor,Update Patient profile,Make payment, Book appointment.
v5.0	<ul style="list-style-type: none">• Added Class Diagram• Updated Domain Model• Addition of design patterns in Sequence Diagrams• Minor Changes in Extended Use Cases, SSD

Project Scope

This app currently caters doctors within Pakistan; however, it can easily be expanded and taken international in the near future. Main purpose of our app is to bridge the gap between patients and doctors of different areas so more specialized and qualified doctors are available to the patients. Patients can reach out to more doctors without hesitation as they can see the reviews and the ratings of the doctors on our application. Moreover, initial data will be needed for the app to be properly used, as customers will have to leave reviews on the app for other customers to view. To make an online reservation or appointment, patients will have to pay some amount beforehand, to reduce the risk of fake appointments and precious time to be wasted. Also all doctors will be verified and provide reports to patients after appointment to know prescribed medicine, recommended tests, and treatment plans.

Actor Goal List

Actor	Goal
Patient	<ol style="list-style-type: none">1. Get diagnosis2. Schedule new appointments3. Update appointments4. View appointment history5. Manage appointment6. View doctor details7. Write doctor reviews8. Filter doctors9. Search doctor10. Manage favorites11. View prescribed medicines12. View recommended tests13. Send test reports14. Message doctor15. Check results16. Doctor	<ol style="list-style-type: none">1. Diagnose patient2. Generate report3. View past history of patient4. Prescribe medicine5. Update patient's tests6. View consultations7. Add consultation8. Update consultation9. Manage consultation10. View consultation history11. Report patient12. Message patient13. Manage account14. Update profile15. Get support16. Get notifications
Admin	<ol style="list-style-type: none">1. Verify doctor2. Ban patient3. Ban doctor4. Monitor activity
Billing System	<ol style="list-style-type: none">1. Generate bill

High Level Use Cases

UC-001

Use Case:	Book appointment
Actor(s):	Patient
Type:	Primary
Description:	The Patient selects a date and time and then chooses a slot from the available slots of the doctor, and then makes payment. Upon successful booking an appointment is booked..

UC-002

Use Case:	Manage Appointment
Actor(s):	Patient
Type:	Primary
Description:	The Patient selects the appointment they wish to manage and chooses to either cancel or reschedule. If the Patient cancels the appointment, the time slot becomes available for other Patients. If the Patient chooses to reschedule, they select a new slot from the available slots. Upon success, The system updates the appointment record. The Patient can view pending and completed appointments as well.

UC-003

Use Case:	Search Doctor
Actor(s):	Patient
Type:	Primary
Description:	The Patient can search and filter available Doctors based on specialties, location, and ratings. The Patient types search terms and selects filters, and the system presents a list of matching Doctors. If needed, the Patient can refine their search. The Patient can then select a Doctor.

UC-004

Use Case:	View Doctor Details
Actor(s):	Patient, Doctor
Type:	Primary
Description:	The Patient can access the Doctor's profile from the search results. The Patient views the details of a Doctor's profile, including their education, specialties, experience, certifications, reviews, location, and ratings. The Patient can then book an appointment. Similarly the doctor can view all his details.

UC-005

Use Case:	Write Reviews
Actor(s):	Patient
Type:	Primary
Description:	The Patient rates and writes a review about a Doctor they had an appointment with. After review is successfully entered, it is visible to all Patients viewing details for that Doctor.

UC-006

Use Case:	Generate report
Actor(s):	Doctor
Type:	Primary
Description:	The Doctor selects the relevant diagnosis details and can attach additional notes or files to make a report. The report provides a comprehensive summary of the diagnosis, treatment plan, recommended tests, and medication prescribed.

UC-007

Use Case:	Make Payment
Actor(s):	Patient
Type:	Primary
Description:	The Patient selects the payment option, selects the appropriate payment method, enters the required payment information, and submits it. The system confirms it and updates the Patient's appointment record with the payment details.

UC-008

Use Case:	Update Profile Patient
Actor(s):	Patient
Type:	Primary
Description:	The Patient views and updates their personal and medical history. The Patient can edit their name, address, contact details, and other information. By doing so the profile is updated.

UC-009

Use Case:	Update Profile Doctor
Actor(s):	Doctor
Type:	Primary
Description:	The Doctor can update his profile, by adding their certifications and experiences.

UC-010

Use Case:	Manage Consultation
Actor(s):	Doctor
Type:	Primary
Description:	The Doctor can view, add, cancel or reschedule a consultation. The Doctor can manually add Patient by searching, and selecting an available time slot to adjust Patient. Also the Doctor can cancel a consultation, or reschedule to a later date. Once done, appointment records are updated.

UC-011

Use Case:	View Patient History
Actor(s):	Doctor
Type:	Primary
Description:	The Doctor can access and view Patient's medical information to know more details about the Patient, their illnesses and also their previous appointments.

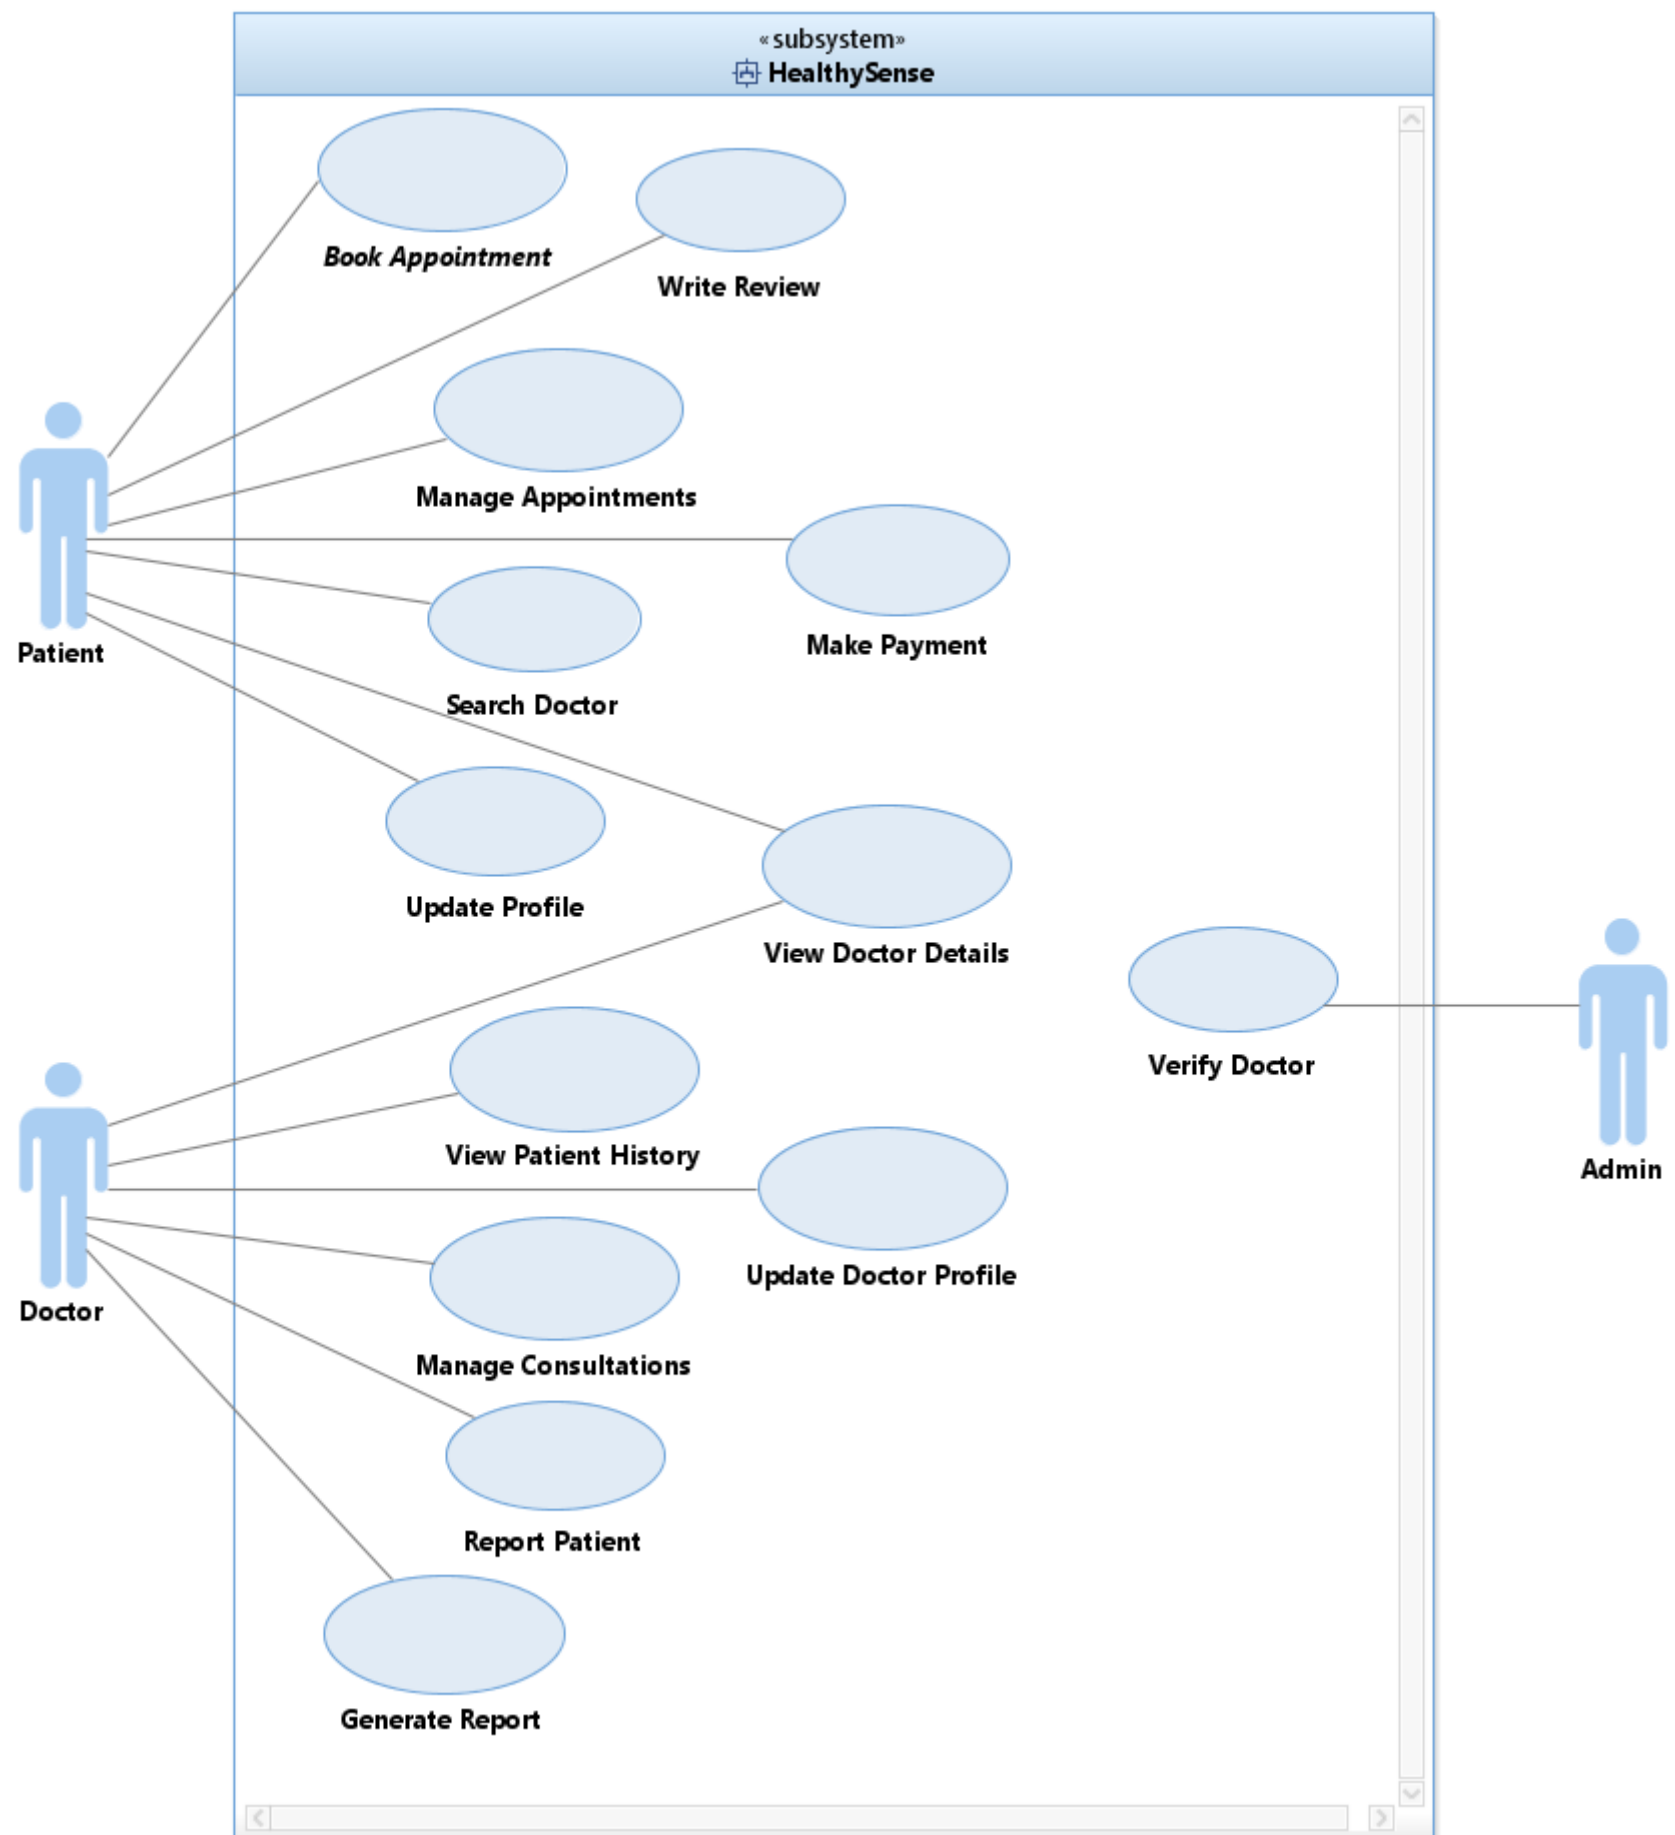

UC-012

Use Case:	Verify doctor
Actor(s):	Admin
Type:	Secondary
Description:	Administrator verifies the credentials and qualifications of a Doctor who has applied to join the system. The Administrator accesses the verification feature and reviews the Doctor's application and supporting documents, such as medical licenses and degrees. The Administrator may also conduct background checks to ensure the Doctor meets the system's requirements. Once the verification is complete, the Administrator approves or rejects the Doctor's application.

UC-013

Use Case:	Report Patient
Actor(s):	Doctor
Type:	Primary
Description:	The Doctor can make a report against the Patient if the Patient has inappropriate behavior during the appointment session. Once a report is generated, it is sent to Admin for evaluation.

Use Case Diagram

Expanded Use Cases

UC-001 Book Appointment

Use Case Name:	Book Appointment	
Scope:	HealthySense	
Level:	User Goal	
Primary Actor:	Patient	
Stakeholders and Interests:	Patient	
Pre-conditions:	Patient logged in.	
Post-conditions	Redirected to Payment Page.	
Main Scenario:		
	User Action	System Response
	1. The user clicks on the desired doctor.	
		2. The system displays doctor and fee information and time slots along with a text field to enter a patient's problem.
	3. The user clicks the calendar icon.	
		4. The system displays a popup of the calendar.
	5. The user navigates through the calendar and clicks on the desired date.	
	6. The user clicks away from the calendar popup.	
		7. The system closes the calendar popup.
	8. The user clicks the “Morning” toggle.	
		9. The system displays respective appointment slots under the toggle buttons, with the unavailable slots turned red.
	10. The user clicks “9:30 am”.	
	11. The user enters their problem in the text field.	
	12. The user clicks the “Book Appointment” button.	
		13. The system checks if valid date and time are selected.
	14. If valid, The system displays a reconfirmation popup “Confirm Booking”.	

	<table border="1"> <tr> <td data-bbox="579 186 949 284">15. The user clicks on "Yes".</td><td data-bbox="957 186 1314 284"></td></tr> <tr> <td data-bbox="579 284 949 433"></td><td data-bbox="957 284 1314 433">16. If confirmed, then the system proceeds to Make Payment use case.</td></tr> </table>	15. The user clicks on "Yes".			16. If confirmed, then the system proceeds to Make Payment use case.
15. The user clicks on "Yes".					
	16. If confirmed, then the system proceeds to Make Payment use case.				
Extensions:	<p>1- Cancellation: The user can click "back" at any time and cancel the process.</p> <ul style="list-style-type: none"> a. User taps the "Back" label. <p>5- Invalid Date: The user selects invalid Date.</p> <ul style="list-style-type: none"> a. The user selects a past date and time. b. The user enters the problem in the text field. c. The user clicks the "Book Appointment" button. d. The system displays the "Invalid Error". e. The system prompts the User to re-enter the invalid information. f. The User re-enters the information and the system re-validates it. g. If invalid information is entered, the Entered Information "Invalid Date" alternative flow is executed again. This continues until the User enters valid information, or chooses Cancellation flow (see "Cancellation" under Book appointment alternative flow). <p>10- Invalid Time: The user does not select a time slot</p> <ul style="list-style-type: none"> a. The user does not select a time. b. The user enters the problem in the text field. c. The user clicks the "Book Appointment" button. d. The system displays the "Invalid Error". e. The system prompts the User to enter the missing information. f. The User enters the information and the system re-validates it. g. If invalid information is entered, the Entered Information "Invalid Date" alternative flow is executed again. This continues until the User enters valid information, or chooses Cancellation flow (see "Cancellation" under Book appointment alternative flow). 				

UC-002 Manage Appointment

Use Case Name:	Manage Appointment	
Scope:	HealthySense	
Level:	User Goal	
Primary Actor:	Patient	
Stakeholders and Interests:	Patient	
Pre-conditions:	Patient logged in. Booked Appointment.	
Post-conditions	<p>Cancel Appointment Selected pending Appointment deleted.</p> <p>Reschedule Appointment: Selected pending Appointment details changed.</p> <p>View Completed Appointment: (main scenario) Redirected to the Write Review page.</p>	
Main Scenario:		
	User Action	System Response
	A) Cancel Appointment	
	1. The user clicks the “Appointments” icon in the navigation bar.	
		2. The system displays all the pending and completed appointments of the user.
	3. The user clicks on a pending appointment.	
		4. The system displays the appointment information along with “Reschedule Appointment” and “Cancel Appointment” buttons.
	5. The user clicks the “Cancel Appointment” button.	
		6. The system displays a list of reasons to select from along with a textfield.
	7. The user clicks on the reason they want to cancel the appointment.	
	8. The user enters “I am not available” in the textfield.	
	9. The user clicks the “Cancel Appointment” button.	
		10. The system checks if a reason is selected.
	B) Reschedule Appointment	
	1. The user clicks the “Appointments” icon in the navigation bar.	

		2. The system displays all the pending and completed appointments of the user.
	3. The user clicks on the appointment.	
		4. The system displays the appointment information along with “Reschedule Appointment” and “Cancel Appointment” buttons.
	5. The user clicks the “Reschedule Appointment” button.	
		6. The system displays a list of reasons to select from along with a textfield and date and time options.
	7. The user clicks on the “I want to change Doctor” toggle.	
	8. The user enters “I am not available” in the textfield.	
	9. The user clicks the calendar icon.	
		10. The system displays a popup of the calendar.
	11. The user navigates through the calendar and clicks on the desired date.	
	12. The user clicks away from the calendar popup.	
		13. The system closes the calendar popup.
	14. The user clicks the “Morning” toggle.	
		15. The system displays respective appointment slots under the toggle buttons, with the unavailable slots turned red.
	16. The user clicks “9:30 am”.	
	17. The user clicks the “Reschedule Appointment” button.	
		18. The system checks if a time and reason is selected.
	C) View Completed Appointment	
	1. The user clicks the “Appointments” icon in the navigation bar.	
		2. The system displays all the pending and completed appointments of the user.

	3. The user selects appointments from the completed appointment list.	
		4. The system displays the appointment details with the "Write Review" button.
	5. User clicks "Write Review".	
		6. The system runs the Write Review use case.
Extensions:	<p>1- Cancellation: The user can click "back" at any time and cancel the process.</p> <ul style="list-style-type: none">a. User taps the "Back" label. <p>A7- Invalid Reason: The user did not select a reason.</p> <ul style="list-style-type: none">a. The user enters the problem in the text field.b. The user clicks the "Reschedule Appointment" button.c. The system displays the "Invalid Error".d. The system prompts the User to enter the missing information.e. The User enters the information and the system re-validates it.f. If invalid information is entered, the Entered Information "Invalid Date" alternative flow is executed again. This continues until the User enters valid information, or chooses Cancellation flow (see "Cancellation" under Manage appointment alternative flow). <p>B11- Invalid Date: The user selects invalid Date.</p> <ul style="list-style-type: none">a. The user selects a past date and time.b. The user enters the problem in the text field.c. The user clicks the "Reschedule Appointment" button.d. The system displays the "Invalid Error".e. The system prompts the User to re-enter the invalid information.f. The User re-enters the information and the system re-validates it.g. If invalid information is entered, the Entered Information "Invalid Date" alternative flow is executed again. This continues until the User enters valid information, or chooses Cancellation flow (see "Cancellation" under Manage appointment alternative flow).	

UC-003 Search Doctor

Use Case Name:	Search Doctor	
Scope:	HealthySense	
Level:	User Goal	
Primary Actor:	Patient	
Stakeholders and Interests:	Patient	
Pre-conditions:	Patient logged in.	
Post-conditions	A sorted and filtered list of doctors matching the search keywords.	
Main Scenario:		
	User Action	System Response
	1. The user clicks on the “Search” icon from the navigation bar.	
		2. The system displays a

		search bar and a list of top doctors sorted by popularity.
	3. The user types doctor in the search bar.	
	4. The user clicks on the filter icon.	
		5. The system displays a popup containing a drop down menu for speciality and toggles for ratings.
	6. The user clicks on "Dermatologist" from the dropdown menu.	
	7. The user toggles "All" ratings.	
	8. The user clicks on the "Apply" button.	
		9. The system closes the popup.
		10. The system displays filtered search.
	11. The user toggles "A-Z".	
		12. The system sorts the results alphabetically.
	13. The user clicks on the doctor.	
Extensions:	1- Cancellation: The user can click "back" at any time and cancel the process. <ul style="list-style-type: none"> a. User taps the "Back" label. 3- The user can skip step 3. 4- The user can skip the filter and jump to step 11.	

UC-004 View Doctor Details

Use Case Name:	View Doctor Details	
Scope:	HealthySense	
Level:	User Goal	
Primary Actor:	Patient	
Stakeholders::	Patient	
Pre-conditions:	Patient logged in.	
Post-conditions	Redirected to the Book Appointment page. (main scenario)	
Main Scenario:		
	User Action	System Response
	1. The user clicks on the doctor.	
		2. The system displays the Doctors details, including doctor ratings, satisfied

		patients chart, experience, services, working hours, clinic/hospital location and fee information.
		3. The system displays a write review icon along with a “Book Appointment” button.
	4. The user clicks on the book appointment button.	
		5. The system runs the Book Appointment” use case.
Extensions:	1- Cancellation: The user can press the back label at any moment. a. The user presses the back label. 4- Choosing Reviews Button a. The user clicks the “Reviews” button. b. The system shows all reviews. 5- Choosing Certificates Button a. The user clicks the “Certificates” button. b. The system shows all certificates.	

UC-005 Write Review

Use Case Name:	Write Review	
Scope:	HealthySense	
Level:	User Goal	
Primary Actor:	Patient	
Stakeholders and Interests:	Patient	
Pre-conditions:	Patient logged in.	
Post-conditions	Review submitted.	
Main Scenario:		
	User Action	System Response
	1. The user clicks on the write review icon from doctor details.	
		2. The system displays the

		review page containing doctor information along with rating bars and a text field.
	3. The user gives a 4 star rating in the “Overall Experience” rating bar.	
	4. The user types, “Very good experience” in the text field.	
	5. The user gives a 4 star rating in the “Rate the Checkup” rating bar.	
	6. The user gives a 4 star rating in the “Clinic Environment” rating bar.	
	7. The user gives a 4 star rating in the “Staff Behaviour” rating bar.	
	8. The user clicks “yes” under “Would you recommend them to your friend”	
	9. The user clicks the “Submit” button.	
		10. The system checks if all rating bars are filled.
Extensions:	<p>1- Cancellation: The user can click “back” at any time and cancel the process.</p> <p>a. User taps the “Back” label.</p> <p>3- Invalid Rating: The user does not fill rating bars</p> <p>a. The user enters the review in the text field.</p> <p>b. The user clicks the “Submit” button.</p> <p>c. The system displays the “Invalid Error”.</p> <p>d. The system prompts the User to enter the missing information.</p> <p>e. The User selects the ratings by clicking the rating bars and the system re-validates it.</p> <p>f. If invalid information is entered, the “Invalid Rating” alternative flow is executed again. This continues until the User enters valid information, or chooses Cancellation flow (see “Cancellation” under Write Review alternative flow).</p> <p>4- The user can skip step 4 and jump to step 5.</p>	

UC-007 Make Payment

Use Case Name:	Make Payment
Scope:	HealthySense
Level:	User Goal
Primary Actor:	Patient
Stakeholders and Interests:	<p>1. Patient The Patient wants to pay for the appointment.</p> <p>2. Doctor The Doctor wants to get money for consulting the patient.</p>
Pre-conditions:	<p>1. Patient has successfully logged in.</p> <p>2. Patient has successfully booked an appointment.</p>
Post-conditions	<p>1. Patient has successfully made payment for his/her appointment and is added to doctor’s consultations.</p>
Main Scenario:	

	User Action	System Response
		1. The system grants user access to the payment page after successful appointment booking.
		2. The system displays time, package, duration and amount details.
	3. The user selects a payment type.	
		4. The system prompts for any required payment details depending on the payment type selected.
	5. The user enters all required details correctly.	
	6. The user selects the make payment option.	
Extensions:	1- Cancellation: at any time, the User may choose to cancel the payment. a. The user selects the cancel option. b. The user is redirected back to the book screen.	

UC-008 Update Profile Patient

Use Case Name:	Update Profile					
Scope:	HealthySense					
Level:	User Goal					
Primary Actor:	Patient					
Stakeholders and Interests:	1. Patient The Patient wants to keep his profile up to date.					
Pre-conditions:	➤ Patient has successfully logged in, for Patient .					
Post-conditions	➤ Patient has updated details in profile, for Patient .					
Main Scenario:	<table><tr><th>User Action</th><th>System Response</th></tr><tr><td>1. The user selects the profile option in settings.</td><td></td></tr></table>		User Action	System Response	1. The user selects the profile option in settings.	
User Action	System Response					
1. The user selects the profile option in settings.						

		2. The system displays the following fields: photo, name, email, dob, country phone number and gender.
		3. Along with medical history(description and type).
	4. The user can add a new medical record by choosing the add option in medical history.	
		5. The system prompts the user to add type from dropdown and write description.
	6. The user adds type and description and selects add.	
		7. The system adds new medical records to the patient's medical history.
	8. The user can view updated medical history in profile.	
	If the patient wants to modify profile details. (from step 3 onwards)	
	4. The user can modify information of any field.	
	5. The user selects the update profile option.	
		6. The system validates the entered information and updates the patient's record.
	7. The user can view the updated profile.	
Extensions:	<p>1- Back: At any time when there is no popup, the user may choose to back.</p> <p>a. The user selects the back option.</p> <p>2- Change page: At any time when there is no popup, the user may choose to navigate to another page.</p> <p>a. The user selects another icon from the navigation bar.</p> <p>b. The user is directed to the selected page.</p> <p>5- Invalid Credentials, while entering details, if the system determines that the user entered invalid details upon selecting the update profile option.</p> <p>a. The error is displayed.</p> <p>b. The system prompts the user to re enter the invalid information.</p> <p>c. The Patient re-enters information and selects the update profile option until it is valid.</p>	

UC-009 Update Profile Doctor

Use Case Name:	Update Profile			
Scope:	HealthySense			
Level:	User Goal			
Primary Actor:	Patient, Doctor			
Stakeholders and Interests:	<div><div>1. Doctor</div><div>The Doctor wants to keep his profile up to date.</div><div>2. Admin</div><div>The Admin wants to keep an updated and verified record of doctors.</div></div>			
Pre-conditions:	➤ Doctor has successfully logged in, for Doctor .			
Post-conditions	➤ Doctor has updated details in profile, for Doctor .			
Main Scenario:	<table><tr><td>User Action</td><td>System Response</td></tr></table>		User Action	System Response
User Action	System Response			

	1. The user selects the profile option from settings.	
		2. The system displays the following fields: photo, name, email, dob, country phone number and gender.
		3. Along with medical certificates.
	4. The user can add a new medical certificate by selecting the add option in medical certificates.	
		5. The system prompts the user to add certificate name, issue date, expiration date and photo of certificate for approval.
	6. The user enters data and selects the send for approval option.	
		7. The system sends an added certificate to the admin for approval.
	8. The user can view the added certificate in profile once approved by admin.	
Extensions:	<p>1- Back: At any time when there is no popup, the user may choose to back.</p> <p>a. The user selects the back option.</p> <p>2- Change page: At any time when there is no popup, the user may choose to navigate to another page.</p> <p>a. The user selects another icon from the navigation bar.</p> <p>b. The user is directed to the selected page.</p> <p>4- Cancel add medical certificate, for Doctor.</p> <p>a. The Doctor selects the cross option.</p> <p>b. The Doctor can view the update profile page.</p>	

UC-011 View Patient Record

Use Case Name:	View Patient Record					
Scope:	HealthySense					
Level:	User Goal					
Primary Actor:	Doctor					
Stakeholders and Interests:	<div>1. Doctor The doctor wants to get more information about the patient he/she is consulting.</div>
